

ADJUSTED COHORT GRADUATION RATES

Graduating from high school is important for students. The adjusted cohort graduation rate (ACGR) measures the percentage of 9th graders who graduate from high school in four years or less with a regular high school diploma. These rates are calculated by dividing the number of graduating students by the number of students who entered high school four years earlier (adjusting for transfers in and out, émigrés, and deceased students).

This data reflects outcomes for the Class of 2018 unless otherwise noted. Disaggregated subgroup data should also be reported. Click into each state/indicator combination on the [home page](#) to see each state's subgroup data.
