COLLEGE- AND CAREER-READY ASSESSMENT SCORE

This indicator reports the percentage of students who score at the college- and career-ready (CCR) level on high school assessments anchored to CCR standards. These assessments include a performance level/cut score that provides high school students a clear signal regarding their readiness for first-year mathematics and English courses at postsecondary institutions and is used by two- and four-year colleges and universities for placement into first-year, credit-bearing courses. The results are useful in preparing students for successful postsecondary transitions and can assist schools in identifying and addressing student learning gaps before students graduate from high school, reducing the need for costly remediation or workforce training.

The assessment data presented below are limited to states that administer a CCR assessment aligned with their state standards in English 11/III and Math 11/Algebra II/Integrated Math III or that administer a college admissions assessment (i.e., SAT or ACT) to at least 90 percent of students.

The results should be disaggregated and reported by cohort, and states should report the results by percentage of students meeting subject-specific benchmarks; average or composite results across subjects may mask results.
